# **Background Information**

 ${\bf SYNGAP1, also \ named \ as \ KIAA1938, is \ the \ major \ constituent \ of \ the \ PSD \ essential \ for \ postsynaptic \ signaling. \ It's \ an$ inhibitory regulator of the Ras-cAMP pathway. SYNGAP1 is a member of the NMDAR signaling complex in excitatory synapses, it may play a role in NMDAR-dependent control of AMPAR potentiation, AMPAR membrane trafficking and synaptic plasticity. SYNGAP1 regulates AMPAR-mediated miniature excitatory postsynaptic currents. SYNGAP1 may be involved in certain forms of brain injury, leading to long-term learning and memory deficits Defects in SYNGAP1 are the cause of mental retardation autosomal dominant type 5 (MRD5).
