For Research Use Only

NF90/ILF3 Polyclonal antibody

Catalog Number:19887-1-AP

Featured Product

29 Publications

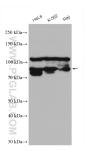

Basic Information	Catalog Number: 19887-1-AP	GenBank Accession BC064836	n Number:	Purification Method: Antigen affinity purification	
	Size:	GenelD (NCBI):		Recommended Dilutions:	
	700 ug/ml	3609		WB 1:2000-1:16000	
	Source:	UNIPROT ID:		IP 0.5-4.0 ug for 1.0-3.0 mg of total protein lysate	
	Rabbit	Q12906		IHC 1:20-1:200	
	Isotype: IgG	Full Name: IF/ICC 1:10-1:100 interleukin enhancer binding factor 3,			
	Immunogen Catalog Number: AG13707	90kDa		1	
		Calculated MW: 894 aa, 95 kDa			
		Observed MW: 90 kDa, 110 kDa			
Applications	Tested Applications:	Positive Controls:			
	WB, IHC, IF/ICC, IP, ELISA WB : He		WB : HeLa cell	WB : HeLa cells, Jurkat cells, mouse spleen tissue, K- 562 cells, Raji cells IP : HeLa cells,	
	Cited Applications: WB, IHC, IF, IP, CoIP, RIP		562 cells, Raji		
			IP: HeLa cells		
	Species Specificity: human, mouse, rat	IHC : human cervical cancer tissue, human place			
	Cited Species:		tissue		
	human, mouse, rat		IF/ICC : Hela cells,		
	TE buffer pH 9.0; (*) Alternatively, antigen retrieval may be performed with citrate buffer pH 6.0				
	Nuclear factor of activated T cells (NFAT) is a transcription factor required for T-cell expression of interleukin-2 (IL2). NFAT binds to a sequence known as the antigen receptor response element-2 (ARRE2) in the IL2 enhancer. NFAT contains two subunits, one is ILF3. ILF3 can facilitate double-standed RNA-regulated gene expression at the level of post-transcription. It binds to and inhibits coding sequences of acid beta-glucosidase and other mRNAs and function at the initiation phase of GCase mRNA translation, probably by inhibiting its binding to polysomes. ILF3 exists main two isoforms NFAR-1 (90 kDa) and -2 (110 kDa). NFAR-1 and -2 each contain two DRBDs in their C-terminus regions and exhibit 98% homology to one another at the amino acid level. NFAR-2 contains an extra 192 amino acids at the C-terminal region that are encoded by an extra three exons present in its corresponding transcript.				
Background Information	NFAT binds to a sequence known contains two subunits, one is ILF3 post-transcription. It binds to and at the initiation phase of GCase n two isoforms NFAR-1 (90 kDa) and and exhibit 98% homology to one	as the antigen receptor . ILF3 can facilitate dou inhibits coding sequenc nRNA translation, proba d -2 (110 kDa). NFAR-1 a e another at the amino a	response element ble-standed RNA-r ces of acid beta-glu bly by inhibiting in and -2 each contair acid level. NFAR-2	-2 (ARRE2) in the IL2 enhancer. NFAT egulated gene expression at the level o ucosidase and other mRNAs and functio to binding to polysomes. ILF3 exists ma two DRBDs in their C-terminus regions contains an extra 192 amino acids at th

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

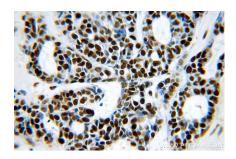

Selected Validation Data

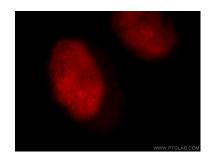

Various lysates were subjected to SDS PAGE followed by western blot with 19887-1-AP (ILF3 antibody) at dilution of 1:8000 incubated at room temperature for 1.5 hours.

IP result of anti-NF90/ILF3 (IP:19887-1-AP, 3ug; Detection:19887-1-AP 1:1000) with HeLa cells lysate 1600ug.

Immunohistochemical analysis of paraffinembedded human cervical cancer using 19887-1-AP (ILF3 antibody) at dilution of 1:100 (under 40x lens).

Immunofluorescent analysis of Hela cells, using ILF3 antibody 19887-1-AP at 1:25 dilution and Rhodamine-labeled goat anti-rabbit IgG (red).
