Background Information

Zinc finger and SCAN domain-containing protein 5A (ZSCAN5A), also known as ZNF495 or ZSCAN5, belongs to the ZSCAN family of transcription factors. ZSCAN transcription factors contain two major domains, the zinc finger domain and the SCAN box. ZSCAN5A has two isoforms and is predicted to be located in the nucleus, it is also predicted to be involved in the regulation of transcription by RNA polymerase II and may be involved in angiogenesis, cell apoptosis, differentiation, migration and invasion, proliferation (PMID: 31218096).
