Background Information

NARFL, also named as PRN and IOP1, belongs to the NARF family. NARFL is a component of the cytosolic iron-sulfur (Fe/S) protein assembly machinery. It is required for maturation of extramitochondrial Fe/S proteins. It seems to negatively regulate the level of HIF1A expression, although this effect could be indirect. [18270200], [16956324] The antibody is specific to NARFL.
