Background Information

SCN9A, also named as NENA, PN1, ETHA, NE-NA, Nav1.7 and hNE-Na, belongs to the sodium channel family. SCN9A mediates the voltage-dependent sodium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, SCN9A forms a sodium-selective channel through which Na+ ions may pass in accordance with their electrochemical gradient. It is a tetrodotoxin-sensitive Na+ channel isoform. SCN9a plays a role in pain mechanisms, especially in the development of inflammatory pain. Defects in SCN9A are the cause of primary erythermalgia or autosomal recessive congenital indifference to pain or paroxysmal extreme pain disorder (PEPD). The antibody is specific to SCN9A
