## Background Information

NUDT3 (nucleoside diphosphate linked moiety X-type motif 3), also named as DIPP1, belongs to the subgroup of phosphohydrolases that preferentially attack diphosphoinositol polyphosphates (PMID: 12105228, 12689335). Five human isoforms of DIPP have been found and named as DIPP type 1 (NUDT3), type 2  $\alpha$  /  $\beta$  (NUDT4), type 3  $\alpha$  (NUDT10) and type 3  $\beta$  (NUDT11), which have the similar molecular weight and high homology (PMID: 12105228). This antibody can recognize all the 5 isoforms of DIPP (NUDT3/4/10/11).
