Background Information

PAFAH1B3, also named as PAFAHG, belongs to the 'GDSL' lipolytic enzyme family and Platelet-activating factor acetylhydrolase IB beta/gamma subunits subfamily. It inactivates paf by removing the acetyl group at the sn-2 position. This is a catalytic subunit. PAFAH1B3 plays an important role during the development of brain. The antibody is specific to PAFAH1B3.
