Background Information

TEAD2 belongs to a protein family that share the TEA/ATTS domain. It acts as a transcriptional factor by cooperatively binding to the GT-II C and Sph(I 1 II) enhancers in the simian virus 40 (SV40) enhancer. Also it can modulate SV40 late transcription together with large T antigen. The transcriptional activity of TEAD2 required several regions of the proteins, a TBP-associated factors and a limiting transcriptional intermediary factors. TEAD2 also performs an essential role in the Hippo signaling pathway. TEAD2 regulates gene expression of YAP1 and WWTR1/TAZ, thus mediating cell proliferation, migration and epithelial mesenchymal transition induction. TEAD2 is strongly expressed in human ovarian carcinoma cell line.
