Background Information

ADAM21 is also present in growing axonal tracts during postnatal development and in growing primary olfactory axons in adults. In the olfactory nerve layer, ADAM21 often, but not always, colocalizes with OMP, a marker of mature olfactory neurons, but is not colocalized with the immature marker β III-tubulin. The exclusive expression of ADAM21 in human testis and its sequence similarity with the fertilins suggest that it is also expressed on sperm cells and involved in sperm maturation and/or fertilization (PMID:9469942).
