Background Information

RSPH4A, also known as RSHL3, belongs to the radial spoke family. RSPH4A is the component of the axonemal radial spoke head which plays an important role in ciliary motility. Mutations in RSPH4A cause primary ciliary dyskinesia 1, a disease arising from dysmotility of motile cilia and sperm (PMID: 19200523, 23798057).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 21931-1-AP (RSPH4A antibody) at dilution of 1:1500 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 21931-1-PBS in a different storage buffer formulation.
