Background Information

SCGB2A2, also known as mammaglobin A, is a member of the secretoglobin superfamily. It is a breast cancer-associated antigen almost exclusively over-expressed in primary and metastatic human breast cancers, making it a specific molecular marker and a potential therapeutic target for breast cancer. SCGB2A2 is a 93-amino acid protein with a calculated molecular weight of 10.5 kDa. This polyclonal antibody is raised against the C-terminal 71 amino acids of the protein encoded by a cDNA (MGC:71974; BC067220).

Selected Validation Data

MCF-7 cells were subjected to SDS PAGE followed by western blot with 23501-1-AP (Mammaglobin A antibody at dilution of 1:300 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 23501-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffinembedded human breast cancer slide using 23501-1-AP (Mammaglobin A antibody at dilution of 1:50. This data was developed using the same antibody clone with 23501-1-PBS in a different storage buffer formulation.
