Background Information

Ier2 (also called ETR101, Pip92, 3CH92 and CHX1, hereafter referred to as Ier2, regardless of species) is an immediate early gene (PMID: 2678945) that was originally found to be upregulated in fibroblasts upon their activation (PMID: 3841511). Immediate early genes are a group of genes that are rapidly induced in quiescent cells by proliferation- and migration-inducing stimuli. Ier2 may have a role in tumor cell motility and metastasis (PMID: 22120713).
