Background Information

CTGF, also known as CCN2, is a member of the CCN family of matricellular proteins. CTGF, a cysteine-rich, matrix-associated, heparin-binding protein, is widely expressed in various human tissues and organs. CTGF has important roles in many biological processes, including cell adhesion, migration, proliferation, angiogenesis, skeletal development, and tissue wound repair, and is critically involved in fibrotic disease and several forms of cancers. In western blotting, there are three different forms of CTGF reported: monomeric forms at approximately 36-38 kDa, homodimeric forms at approximately 70 kDa, and lower molecular mass fragment forms (PMID: 14592956).

Selected Validation Data

IP result of anti-CTGF (IP:23903-1-AP, 4ug; Detection:23903-1-AP 1:1000) with mouse brain tissue lysate 1800 ug.

Immunohistochemical analysis of paraffin-embedded mouse brain tissue slide using 23903-1-AP (CTGF antibody) at dilution of 1:200 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

Immunohistochemical analysis of paraffin-embedded mouse heart tissue slide using 23903-1-AP (CTGF antibody) at dilution of 1:200 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

Various lysates were subjected to SDS PAGE followed by western blot with 23903-1-AP (CTGF antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.
