Background Information

YEATS domain containing 2 (YEATS2) protein is a scaffolding subunit of the ATAC complex. Studies have shown that YEATS2 is a selective histone crotonylation reader and is related to histone acetylation. In addition, YEATS2 is associated with the progression of various tumors. Overexpression of YEATS2 promotes the proliferation and migration of pancreatic cancer cells. YEATS2 has been reported to be associated with the progression of non-small-cell lung cancer through histone acetylation.
