Background Information

SLC35F2, also named as Solute carrier family 35 member F2, is a 374 amino acid protein, which belongs to the SLC35F solute transporter family. SLC35F2 as a Multi-pass membrane protein is a putative solute transporter. SLC35F2 is highly homologous to the lung squamous cell cancer-related gene, LSCC3, which is highly expressed in lung squamous cell tumour tissues. However, the clinical implication of the SLC35F2 gene in tumour development and progression remains unclear.
