## Background Information

Short transient receptor potential channel 5 (TRPC5), which belongs to TRPC5 sub-subfamily of transient receptor (TC 1.A.4) family, thought to form a receptor-activated non-selective calcium permeant cation channel, and probably is operated by a phosphatidylinositol second messenger system activated by receptor tyrosine kinases or G-protein coupled receptors. TRPC5 has also been shown to be calcium-selective and may also be activated by intracellular calcium store depletion.
