Background Information

Plakophilin 2 also known as PKP2, belongs to the beta-catenin family. Plakophilin proteins contain numerous armadillo repeats, localize to cell desmosomes and nuclei, and participate in linking cadherins to intermediate filaments in the cytoskeleton (PMID: 10828611). Mutations in PKP2 are associated with Arrhythmogenic right ventricular dysplasia, familial, 9 (ARVD9)(PMID: 15489853).
