Background Information

DACT1 (Dapper/Frodo) is a member of the Dapper family, which includes three genes: DACT1, DACT2 and DACT3. As a tumor suppressor, DACT1 is downregulated in multiple tumor types, such as liver, colon and breast cancer. DACT1 is an important modulator of Wnt signaling, interacting with key components of the various Wnt transduction pathways. For instance, DACT1 binds to disheveled homolog 1 (Dvl1) to induce the degradation of Dvl1 and the subsequent inhibition of the Wnt/β-catenin pathway. (PMID: 34252542, PMID: 29456669)
