Background Information

SLC22A13 (solute carrier family 22 member 13), also known as OCTL1. It is expected to be located in cell membrane and mainly expressed in kidney. The calculated molecular weight of SLC22A13 is 60 kDa. This antibody can recognize the 52 kDa isoform of target. This gene encodes a member of the organic-cation transporter family. It is located in a gene cluster with another member of the family, organic cation transporter like 4. The encoded protein is a transmembrane protein involved in the transport of small molecules. This protein can function to mediate urate uptake and is a high affinity nicotinate exchanger in the kidneys and the intestine.
