## **Background Information**

Titin, or connectin, is a giant muscle protein expressed in the cardiac and skeletal muscles that spans half of the sarcomere from Z line to M line. It plays a key role in muscle contraction and relaxation, maintaining the structural integrity of the myotome(PMID: 11846417). Mutations in Titin are associated with familial hypertrophic cardiomyopathy 9, and autoantibodies to titin are produced in patients with the autoimmune disease scleroderma(PMID: 15802564).

## Selected Validation Data

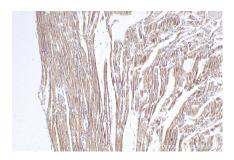

Immunohistochemical analysis of paraffinembedded mouse heart tissue slide using 27867-1-AP (Titin antibody) at dilution of 1:400 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 27867-1-PBS in a different storage buffer formulation.

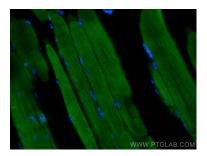

Immunofluorescent analysis of (4% PFA) fixed mouse skeletal muscle tissue using Titin antibody (27867-1-AP) at dilution of 1:200 and Coralite® 488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L). This data was developed using the same antibody clone with 27867-1-PBS in a different storage buffer formulation.
