Background Information

SETD3 (SET domain protein 3), a ubiquitously expressed protein, is epigenetically up-regulated in response to muscle loading and hypertrophy. The SETD3 mRNA is ubiquitously expressed at a similar basal level in most examined tissues, with the noticeable exception of the skeletal muscle, kidneys, and testes (PMID: 34685411). SETD3 deficient female mice have severely decreased litter sizes due to primary maternal dystocia that is refractory to ecobolic induction agents (PMID: 30626964).

Selected Validation Data

MCF-7 cells were subjected to SDS PAGE followed by western blot with 28692-1-AP (SETD3 antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffin-embedded mouse small intestine tissue slide using 28692-1-AP (SETD3 antibody) at dilution of 1:200 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
