Background Information

SULT2B1 is a member of hydroxysteroid sulfotransferase (SULT) family that catalyzes sulfonation of hormones and other molecules. SULT2B1 encodes two isoforms, SULT2B1a and SULT2B1b, that differ only at their amino termini but have distinct biochemical properties as well as tissue distribution. The human fetal brain appears to only express the SULT2B1a isoform, while SULT2B1b is the predominant hydroxysteroid sulfotransferase expressed in human skin. Northern blot analysis revealed SULT2B1a has a limited tissue distribution in liver, adrenal and stomach, whereas SULT2B1b can be detected in a variety of hormone-responsive tissues including placenta, ovary, uterus, and prostate.
