Background Information

LASS2, also known as TMSG1, is a novel suppressor of human cancer metastasis. As one member of LASS family, including LASS1-6, LASS2 mRNA is at the highest level of all LASS members, and has the broadest tissue distribution, particularly abundant in the liver, kidney and brain in mice. The biological roles of LASS2 include protection from aging, hepatic INS resistance, and hepatocellular carcinoma (HCC) progression. LASS2 has been correlated with the degree of invasion and recurrence of carcinomas of the prostate, liver, breast and bladder.
