Background Information

S100A10 (also known as p11) is a member of the S100 family of EF-hand-type Ca²⁺-binding proteins and participates in various biological processes. The overexpression of S100A10 and S100A2 in CRCs may be used for prognosis assessment in relapse CRCs after adjuvant 5-fluorouracil (5-Fu) therapy and radical surgery. S100A10 usually associates with annexin A2 (ANXA2, p36) to form a heterotetramer complex (AII_t) and is mainly localized to the cell membrane and cytoplasm. (PMID: 34336846)
