Background Information

Rho GTPase-activating protein 44 (ARHGAP44) belongs to the Rho GTPase-activating protein (RhoGAP) family, also known as Rich2. ARHGAP44 plays an important role in cytoskeletal dynamics, cellular motility and signaling. Its high expression in osteosarcoma correlates with tumor malignancy, suggesting its potential as a potential therapeutic target. In addition, ARHGAP44 may also be involved in the pathogenesis of diabetes and cardiovascular diseases, and its specific role in these diseases needs to be further investigated in the future.
