Background Information

ZNF157, also known as HZF22, is a zinc finger protein gene located at the X chromosome short arm region 11.3. As a member of the zinc finger protein family, ZNF157 primarily functions through its C2H2-type zinc finger domain. This domain enables ZNF157 to bind to DNA, thereby playing a key role in the regulation of gene expression.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 33838-1-AP (ZNF157 antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 33838-1-PBS in a different storage buffer formulation.
