

HLA-F Polyclonal antibody

Catalog Number: 55379-1-AP

Basic Information

Catalog Number:

55379-1-AP

Size:

1000 µg/ml

Source:

Rabbit

Isotype:

IgG

GenBank Accession Number:

NM_018950

GeneID (NCBI):

3134

UNIPROT ID:

P30511

Full Name:

major histocompatibility complex,
class I, F

Calculated MW:

50 kDa

Observed MW:

50 kDa, 66-70 kDa

Purification Method:

Antigen affinity purification

Recommended Dilutions:

WB 1:500-1:2000

Applications

Tested Applications:

WB, ELISA

Species Specificity:

human, mouse

Positive Controls:

WB : Raji cells, A431 cells, human placenta tissue,
Jurkat cells, mouse spleen tissue

Background Information

Human major histocompatibility complex (MHC) antigens, also referred to as human leukocyte antigens (HLA), are encoded by genes located on the short arm of chromosome 6 (6p21.3). There are two classes of HLA antigens: class I and class II. This class I molecules are membrane glycoproteins composed of a heavy (alpha) chain which is encoded by a HLA class I gene, and β 2-microglobulin light (beta) chain. The most extensively characterized members of the HLA class I gene family are the genes encoding the major transplantation antigens, HLA-A, B and C. HLA-F is a non-classical MHC class I molecule. (PMID: 667938; 3375250; 2249951)

Storage

Storage:

Store at -20°C.

Storage Buffer:

PBS with 0.02% sodium azide and 50% glycerol pH 7.3.

Aliquoting is unnecessary for -20°C storage

Selected Validation Data

Raji cells were subjected to SDS PAGE followed by western blot with 55379-1-AP (HLA-F antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.
