Background Information

CNTNAP1, also named as CASPR, NRXN4, p190, Neurexin IV and Neurexin-4, belongs to the neurexin family. It plays a role in the formation of functional distinct domains critical for saltatory conduction of nerve impulses in myelinated nerve fibers. CNTNAP1 seems to demarcate the paranodal region of the axo-glial junction. In association with contactin, CNTNAP1 may have a role in the signaling between axons and myelinating glial cells. This antibody is specific to CNTNAP1.
