For Research Use Only

Gamma Cystathionase Monoclonal antibody, PBS Only

Purification Method:

Protein A purification

CloneNo.:

2C7F9

Catalog Number: 60234-1-PBS

Featured Product

Basic Information

Catalog Number: 60234-1-PBS

Size: 1 mg/ml

Source: Mouse

Isotype:

BC015807 GeneID (NCBI): 1491

GenBank Accession Number:

UNIPROT ID: P32929 Full Name:

cystathionase (cystathionine gamma-

Immunogen Catalog Number: lyase)

AG2872 Calculated MW:

405 aa, 45 kDa Observed MW: 40-45 kDa

Applications

Tested Applications: WB,Indirect ELISA,IHC,IF Species Specificity: human, mouse, rat

Background Information

CTH, also named as Gamma-cystathionase and CSE, belongs to the transsulfuration enzymes family. It catalyzes the last step in the transsulfuration pathway from methionine to cysteine. CTH converts two cysteine molecules to lanthionine and hydrogen sulfide. CTH can also accept homocysteine as substrate. It specificity depends on the levels of the endogenous substrates. CTH is the major H2S-producing enzyme in kidney, liver, vascular smooth muscle cells and enterocytes. The endogenous production of H2S plays a significant role in the regulation of cellular functions, including cell growth, hyperpolarization of cell membranes, modulation of neuronal excitability and relaxation of smooth muscle cells. The CSE/H2S pathway is upregulated in the heart in a murine model of CVB3-induced myocarditis and that inhibition of endogenous H2S is beneficial to treatment early in the disease while administration of exogenous H2S is protective to infected myocardium during the later stage. Mutations in the gene encoding CTH can result in the autosomal recessive disease cystathioninuria; a disorder characterized by the unusual accumulation of plasma cystathionine causing increased urinary excretion. Both male and female CTH-null mice showed hypercystathioninemia and hyperhomocysteinemia, but not hypermethioninemia. CSE has also been reported to be expressed in endothelial cells and contribute to endothelium-dependent vasorelaxation. It can be detected a minor 36 kDa band probably representing a degradative intermediate except the major 43 kDa band in vitamin B6-deficient rat liver(PMID:8660672). CTH also can be detected as ~70kD in rat liver (PMID: 18974309).

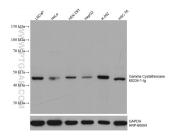

Storage

Storage: Store at -80°C.

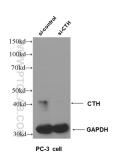

The product is shipped with ice packs. Upon receipt, store it immediately at -80°C Storage Buffer.

PBS Only

Selected Validation Data

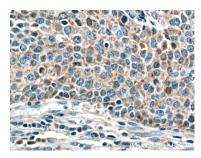

Various lysates were subjected to SDS PAGE followed by western blot with 60234-1-lg (Gamma Cystathionase antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated GAPDH Monoclonal antibody (HRP-60004) as loading control. This data was developed using the same antibody clone with 60234-1-PBS in a different storage buffer formulation.

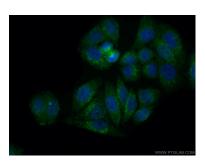

WB result of CTH antibody (60234-1-lg, 1:500) with si-control and si-CTH transfected PC-3 cells. This data was developed using the same antibody clone with 60234-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffinembedded human lung cancer tissue slide using 60234-1-Ig (Gamma cystathionase antibody at dilution of 1:400 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 60234-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffinembedded human lung cancer tissue slide using 60234-1-Ig (Gamma cystathionase antibody at dilution of 1:400 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 60234-1-PBS in a different storage buffer formulation.

Immunofluorescent analysis of (10% Formaldehyde) fixed HepG2 cells using 60234-1-Ig(Gamma cystathionase antibody) at dilution of 1:50 and Alexa Fluor 488-conjugated AffiniPure Goat Anti-Mouse IgG(H+L). This data was developed using the same antibody clone with 60234-1-PBS in a different storage buffer formulation.
