Background Information

Inhibin β A (INHBA) is a ligand in the transforming growth factor β (TGF- β) superfamily. Inhibin β A forms a disulfide-linked homo-dimer known as activin A, which has been implicated in multiple biologic processes, including neoplastic progression. The inhibin β A can also bind the β B and α isoforms to form activin AB and inhibin, respectively.

Selected Validation Data

HepG2 cells were subjected to SDS PAGE followed by western blot with 60352-1-Ig (INHBA-Specific Antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 60352-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human lung cancer tissue slide using 60352-1-Ig (INHBA-Specific Antibody) at dilution of 1:200 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 60352-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human lung cancer tissue slide using 60352-1-Ig (INHBA-Specific Antibody) at dilution of 1:150 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 60352-1-PBS in a different storage buffer formulation.
