

For Research Use Only

Anti-Mouse IFN gamma (XMG1.2)

Catalog Number: 65153-1-Ig

Basic Information

Catalog Number: 65153-1-Ig	GenBank Accession Number: BC119063	Purification Method: Affinity purification
Size: 500ug, 0.5 mg/ml	GeneID (NCBI): 15978	CloneNo.: XMG1.2
Source: Rat	Full Name: interferon gamma	
Isotype: IgG1, kappa	Calculated MW: 17 kDa	

Applications

Tested Applications:
FC

Species Specificity:
Mouse

Background Information

Interferon gamma (IFN γ), is a type II interferon that provides immunity against bacterial, viral and protozoan infections. In its active form, IFN γ is a glycosylated, non-covalently linked homodimer of 29-32 kDa subunits. It is produced by a number of immune cell types including natural killer cells, natural killer T cells, and effector lymphocyte T cells following antigenic and inflammatory triggers. The IFN γ dimer binds to its cognate receptor which has two subunits: IFN- γ R1 which is the ligand-binding chain (α chain) and IFN- γ R2, the signal-transducing chain (β chain). Binding to the receptor activates the JAK/STAT pathway which in turn activates IFN γ responsive genes. While IFN γ can inhibit viral replication, it also works as an immune-modulator and immune-stimulator by increasing surface expression of class I MHC proteins. (PMID: 19268625; 10688427)

Storage

Storage:
Store at 2-8°C. Stable for one year after shipment.

Storage Buffer:
PBS with 0.09% sodium azide.

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Selected Validation Data

1x10⁶ unstimulated or PMA and ionomycin stimulated C57BL/6 Th1-polarized splenocytes were intracellularly stained with 0.5 ug Anti-Mouse IFN gamma (65153-1-Ig, Clone: XMG1.2) and FITC anti-rat IgG1 Antibody. Cells were co-stained with 0.5 ug Coralite® Plus 647 Anti-Mouse CD4 (GK1.5) (CL647-65104, Clone: GK1.5). Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
