Background Information

KLF15, a kidney-enriched Krüppel-like zinc finger-containing transcription factors, is a transcriptional activator that binds the CLCNKA promoter. The nuclear protein KLF15, is expressed primarily in liver, heart, skeletal muscle and kidney tissues but is not detected in lymphoid tissues or bone marrow. It is an important regulator of GLUT4 in both adipose and muscle tissues. (PMID:10982849, PMID:16615998).
