Background Information

CLPP is the putative ATP-dependent Clp protease proteolytic subunit and also named as endopeptidase Clp. It belongs to the peptidase S14 family. Clp cleaves peptides in various proteins in a process that requires ATP hydrolysis. It may be responsible for a fairly general and central housekeeping function rather than for the degradation of specific substrates. This protein has a transit peptide of 56 amino acid.

Selected Validation Data

human heart tissue were subjected to SDS PAGE followed by western blot with 66271-1-Ig (CLPP Antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 66271-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human heart tissue slide using 66271-1-Ig (CLPP Antibody) at dilution of 1:200 (under 40x lens). This data was developed using the same antibody clone with 66271-1-PBS in a different storage buffer formulation.
