Background Information

Serum response factor (SRF) is a transcription factor that binds the serum response element (SRE), a sequence that mediates the transient response of many cellular genes to growth stimulation. SRF is required for cardiac differentiation and maturation due to the role in cardiac cell growth and muscle gene regulation. The full-length SRF protein is 67 kDa and molecular weight of cleaved fragment is 50 kDa and 20 kDa (PMID: 21769134).
