Background Information

INF2 is a member of the formin family of actin-regulating proteins. INF2 is peripherally bound to the cytoplasmic face of the endoplasmic reticulum (ER). Mutations in the formin gene INF2 cause focal segmental glomerulosclerosis. The predicted MW of INF2 is around 136 kDa, while higher molecular mass from 140-200 kDa has been reported in literature (26383224,20493814,19366733).
