Background Information

Synaptopodin is a actin-associated protein expressed in mature dendritic spines and renal podocytes. Several isoforms of synaptopodin have been reported: the 100 kDa neural form and 110 kDa renal form. 44-45 kDa may represent the degradation product of synaptopodin. As a podocyte specific protein, synaptopodin expression level was decreased in kidney but increased in the urinary podocytes from patients with preeclampsia, indicating that synaptopodin is a useful marker for preeclampsia. Selected Validation Data

rat brain tissue were subjected to SDS PAGE followed by western blot with 67339-1-Ig (SYNPO antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 67339-1-PBS in a different storage buffer formulation.

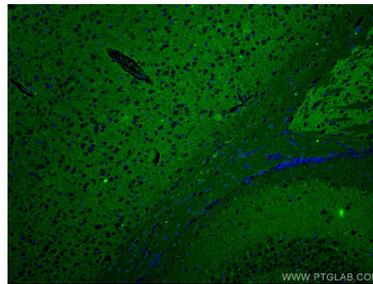

Immunohistochemical analysis of paraffin-embedded rat brain tissue slide using 67339-1-Ig (SYNPO antibody) at dilution of 1:1500 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 67339-1-PBS in a different storage buffer formulation.

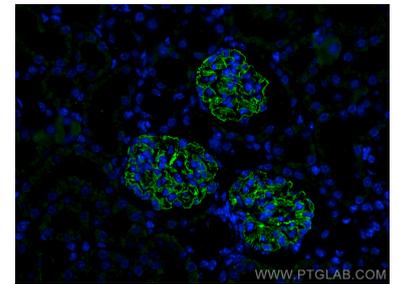

Immunohistochemical analysis of paraffin-embedded rat brain tissue slide using 67339-1-Ig (SYNPO antibody) at dilution of 1:1500 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 67339-1-PBS in a different storage buffer formulation.

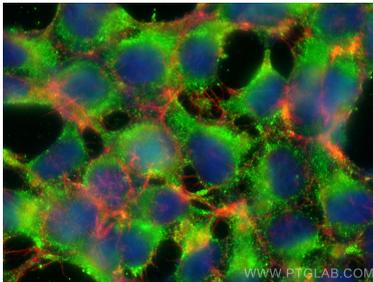

Immunohistochemical analysis of paraffin-embedded human kidney tissue slide using 67339-1-Ig (SYNPO antibody) at dilution of 1:8000 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 67339-1-PBS in a different storage buffer formulation.
