Background Information

SEMA7A, also named CD108 and SEMAL, belongs to the semaphorin family. SEMA7A is the only membrane-associated glycosylphosphatidylinositol (GPI)-linked semaphorin and plays a role in the regulation of neuronal axon outgrowth. In addition to its role in guiding axon pathfinding during neuronal development, Semaphorin 7A has diverse functions in morphogenesis and immune cell control and regulates T cell responses via the $\alpha 1 \beta 1$ integrin receptor (PMID: 31179640). SEMA7A has 2 isoforms with molecular weights of 73 and 75 kDa, respectively.

Selected Validation Data

human red blood cells were subjected to SDS PAGE followed by western blot with 67397-1-Ig (SEMA7A antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 67397-1-PBS in a different storage buffer formulation.
