## Background Information

mCherry is a fluorophore (a fluorescent protein) used in biotechnology as a tracer to follow the flow of fluids, as a marker when tagged to molecules and cell components. mCherry is the second generation monomeric red fluorescent protein that have improved brightness and photostability. mCherry and the majority of red fluorescent proteins derive from a protein isolated from *Discosoma* sp. mCherry is a monomeric fluorescent construct with peak absorption/emission at 587 nm and 610 nm, respectively.
