Background Information	FLAD1 is a protein-coding gene for flavin adenine dinucleotide synthetase (FADS), a key enzyme in the FAD biosynthesis process which contains an N-terminal molybdopterin -binding (MPTb) domain and a C-terminal domain (FADS domain) (PMID: 32714079). Alternative splicing of the human FLAD1 gene generates different isoforms of the enzyme FAD synthase60 and -50 kDa bands correspond to the expected mitochondrial FADS1 and cytosolic FADS2 proteins, respectively (PMID: 29316637).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 68491-1-Ig (FLAD1 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 68491-1-PBS in a different storage buffer formulation. WB result of FLAD1 antibody (68491-1-Ig; 1:1000; incubated at room temperature for 1.5 hours) with sh-Control and sh-FLAD1 transfected HEK-293 cells. This data was developed using the same antibody clone with 68491-1-PBS in a different storage buffer formulation.
