Background Information

UCHL5 (Ubiquitin carboxyl-terminal hydrolase isozyme L5) is also named as UCH37 and belongs to the peptidase C12 family. It is functionally linked with multiple protein complexes and signal transduction pathways. UCH37's weight average molecular weight increases as a function of its concentration. By size-exclusion chromatography, the apparent molecular weight of UCH37 was 51, 56, 70, and 109 kDa at 0.15, 0.69, 2.4, and 9.5 mg/mL, respectively. Given UCH37's monomeric molecular weight of 37 kDa and its apparent elongated shape, its tendency toward an apparent molecular weight between 40 and 50 kDa at decreasing concentrations is appropriate for UCH37 monomers (PMID:21953935).
