## Background Information

Inositol-requiring enzyme 1 (IRE1) is an ER transmembrane sensor that activates the UPR to maintain the ER and cellular function. Although mammalian IRE1 promotes cell survival, it can initiate apoptosis via decay of antiapoptotic miRNAs. IRE1 contains a ribonuclease domain in its cytoplasmic region which initiates splicing reaction by direct cleavage of XBP1 mRNA at the two stem loop structures. IRE1 plays instrumental protumoral roles in several cancers, and high IRE1 activity has been associated with poorer prognoses. (PMID: 23880584, PMID: 32861679, PMID: 31875595)

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 82687-5-RR (IRE1; ERN1 antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 82687-5-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 82687-5-RR against Human IRE1/ERN1 were performed. The affinity constant is 1.12 nM.
