Background Information

AURKA(Aurora kinase A), also named as STK6, STK15 or AIK, belongs to the Ser/Thr protein kinase family. This protein may play a role in cell cycle regulation during anaphase and/or telophase by being involved in microtubule formation and/or stabilization. Some recent evidence revealed that AURKA may also be implicated in tumor development and progression. AURKA is expressed highly in testis and various proliferating cells, migrating as a 46 kDa protein in SDS PAGE. Nuclear staining for AURKA is weak or nonexistent in normal tissue but strong in tumor tissue(PMID:19107951).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 82906-2-RR (AURKA antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours.

WB result of AURKA antibody (82906-2-RR; 1:10000; incubated at room temperature for 1.5 hours) with sh-Control and sh-AURKA transfected HEK-293 cells.

Biolayer interferometry (BLI) kinetic assays of 82906-2-RR against Human AURKA were performed. The affinity constant is 76.9 pM.
