Background Information

Glucagon receptor (GCGR) is a secretin-like (class B) family of G-protein coupled receptors (GPCRs). It plays an important role in elevating the glucose concentration in the blood and has thus become one of the promising therapeutic targets for treating type 2 diabetes mellitus (PMID: 26236379). GCGR is a 62-kDa glycoprotein that contains at least four N-linked oligosaccharide chains (PMID: 2174441; 15245877). Defects in the gene of GCGR cause non-insulin-dependent diabetes mellitus (NIDDM).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 84237-5-RR (GCGR antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 84237-5-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 84237-5-RR against Human GCGR were performed. The affinity constant is 71.6 pM.
