Background Information

Granzyme A (GrA, a tryptase) is necessary for target cell lysis in cell-mediated immune responses. It activates mitochondrial outer membrane permeabilization- and caspase-independent cell death pathways by cleaving the mitochondrial complex I component NDUF53 after lys56. Among serine proteases GrA has a unique quaternary structure consisting of a disulphide-linked homodimer of 60 kDa linked via Cys93 (PMID: 12819769). This protein has 2 isoforms produced by alternative promoter usage with the MW of 29 and 27 kDa.

Selected Validation Data

NK-92 cells were subjected to SDS PAGE followed by western blot with 84583-4-RR (GZMA antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 84583-4-PBS in a different storage buffer formulation.
