Background Information

CCL3, also known as macrophage inflammatory protein-1 alpha (MIP-1 α), is a chemokine that plays a significant role in immune responses. It is involved in recruiting immune cells, particularly monocytes and T cells, to sites of inflammation and infection. CCL3 is produced by various cell types, including activated macrophages and lymphocytes, and is crucial for orchestrating the immune response to infections and tissue injury. In summary, CCL3 is a multifunctional chemokine that is essential for immune cell recruitment and plays a role in various diseases, including chronic inflammatory conditions and cancer.
