Background Information

RB1CC1, also named as RBICC, is implicated in the regulation of RB1 expression and functions as a DNA-binding transcription factor. It is a potent regulator of the RB1 pathway and a mediator that plays a crucial role in muscular differentiation. Its expression is, thus, a prerequisite for myogenic differentiation. Involved in autophagy. RB1CC1 is required for autophagosome formation. It is probably involved in the tumorigenesis of breast cancer. RB1CC1 is frequently mutated in breast cancer and shows characteristics of a classical tumor suppressor gene.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 84757-4-RR (RB1CC1 antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 84757-4-PBS in a different storage buffer formulation.

Biolayer interferometry (BLL) kinetic assays of 84757-4-RR against Human RB1CC1 were performed. The affinity constant is 0.396 nM.
