## **Background Information**

Sushi domain containing 2 (SUSD2) is a type I transmembrane protein that contains a somatomedin B, AMOP, von Willebrand factor type D and Sushi domains, which are frequently found in molecules associated with cell-cell and cell-matrix adhesion. SUSD2 is composed of 822 amino acids with a predicted molecular weight of 90.4 kDa (PMID: 31387209). Three specific SUSD2 bands were present, the glycosylated, full-length protein (~110 kDa), ~90 kDa band represents full-length SUSD2 with minimal glycosylation, and a strong ~60 kDa band, represents a cleaved product of SUSD2 at the GD-PH sequence in the endoplasmic reticulum (PMID:27775699, 32595828).

## **Selected Validation Data**

human placenta tissue were subjected to SDS PAGE followed by western blot with 84852-4-RR (SUSD2 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 84852-4-PBS in a different storage buffer formulation.
