## Background Information

The tyrosine kinase receptor TrkA (or neurotrophin receptor kinase 1, NTRK1) has been predominately studied for its role during the development of the nervous system. In developing neurons, TrkA activation upon binding of its ligands nerve growth factor (NGF) or neurotrophin-3 (NT-3) results in the stimulation of various tyrosine kinase-induced signaling pathways leading to neuronal outgrowth. (PMID: 32957504) This antibody recognizes the phosphorylation of TrkA at site 496, which is the phosphorylation of the TrkA-I (isoform 2) sequence at site 490.

## Selected Validation Data

Non-treated and pervanadate treated HeLa cells were subjected to SDS PAGE followed by western blot with 84976-1-RR (Phospho-NTRK1 (Tyr496) antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours. The membrane was stripped and re-blotted with Vinculin (66305-1-Ig) antibody as a loading control. This data was developed using the same antibody clone with 84976-1-PBS in a different storage buffer formulation.
