Background Information

KCTD5 belongs to the human potassium (K⁺) channel tetramerization domain (KCTD) family of proteins which share sequence similarity with the cytoplasmic domain of voltage-gated K⁺ channels (Kv channels). The KCTD proteins have relatively conserved N-terminal domains and variable C-termini (PMID: 24268103). KCTD5 interacts with cullin3 and has been proposed to function as substrate adapter for cullin3 based ubiquitin E3 ligases (PMID: 26188516).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 85210-5-RR (KCTD5 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 85210-5-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 85210-5-RR against Human KCTD5 were performed. The affinity constant is 1.01 nM.
