Background Information

Decorin is a member of the small leucine-rich proteoglycan family of proteins. Decorin interacts with type I collagen fibrils, thereby influencing the kinetics of fibril formation and the distance between adjacent collagen fibrils. The binding of this protein to multiple cell surface receptors mediates its role in tumor suppression, including a stimulatory effect on autophagy and inflammation and an inhibitory effect on angiogenesis and tumorigenesis. Decorin (~ 40 kDa) also binds glycosaminoglycan chains to form big molecules.

Selected Validation Data

Tissue were subjected to SDS PAGE followed by western blot with 85737-4-RR (Dcn antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 85737-4-PBS in a different storage buffer formulation.
